

Axxiome Banking: Launch new products in days with Axxiome's digital platform

Axxiome Banking is a comprehensive, ready to run platform for consumer and business retail banking that is underpinned by proven state-of-the-art technology. With fully documented and streamlined end-to-end processes, the effort needed to implement Axxiome Banking is minimal and reduces the time to market significantly.

OVERVIEW

The complexity of legacy architecture can be detrimental to the launch of a new product to the market. Financial institutions can't afford for new product launches to take a year or more, but complicated integration patterns make it difficult to enable the required processes for launching and managing new products. Different technology across banking channels can also mean that many components must be amended or updated to enable new products, or that customer data is not available in all components of the bank's architecture.

Axxiome takes a holistic approach to financial products with the Axxiome Banking, offering one core banking solution to host all financial products. Axxiome Banking has a simple architecture and simple integration patterns which allow quick and seamless availability of new products across an omni-channel architecture.

Not only can Axxiome Banking be implemented in record time, but as new products are created in its core, they become available in all channels of the architecture. As the processes serving these products are managed centrally in its omni-channel platform, any modification needed on them will be done once and will become available in all channels at once. Furthermore, the Axxiome Banking is fully documented following a successful implementation methodology, meaning each process, product and development is documented to smallest detail.

GENERAL FACTS & FEATURES

- Omni-channel platform for managing all processes related to the new products
- Simple and high performance architecture
- Simple regulatory compliance capabilities
- Fully documented solution
- Best in class end-to-end processes available out-of-the-box
- Readily available financial products that are designed to compete with market leading products
