

AXXIOME LEASE VS FINANCE ANALYTICS

Axiome Lease vs Finance Analytics is a sophisticated and user-friendly lease/buy/finance system, suited to any entity contemplating capital projects and/or equipment expenditures. The model incorporates the knowledge and experience of financial experts who have devoted their entire careers to this line of finance.

Axiome Lease vs Finance Analytics can be used by both purchasers as well as vendors of depreciable assets. The model summarizes the least cost alternative by comparing after-tax cash flows of each alternative - whether it's cash, financing or leasing. It also helps identify a fourth alternative known as a Joint Election Lease. This model can also be used in evaluating the feasibility of proposed sale/leasebacks of equipment and potential tax implications.

How does Axiome Lease vs Finance Analytics work?

The model is neutral and is customized to an individual entity's inputs and drivers such as: marginal taxation rates, return on equity, tax loss carry forwards, borrowing rates, etc. The model then discounts the cash flows for all of the alternatives and equates it back to the least cost alternative in terms of net present value of cash flows and an interest rate.

Users are encouraged to review the output and reports with their internal/external accountants and tax advisors.

How is Axiome Lease vs Finance Analytics different?

It is unbiased, neutral and specific to each user's circumstances, which is what Axiome Lease vs Finance Analytics measures.

Features & Benefits of Axiome Lease vs Finance Analytics:

- ✔ Reduces external advisory fees, given the model completes the analysis needed.
- ✔ Eliminates biased decisions for capital or equipment projects. Focuses on the least cost after tax alternative (i.e., cash, finance, lease or joint election lease).
- ✔ Accounts for changing corporate tax circumstances, tax loss carry forwards, and/or accelerated depreciation.
- ✔ Identifies and quantifies applicable investment tax credit and the impact on the overall decision.
- ✔ Break even analysis reinforces the best alternatives by equating back to interest rate differentials.
- ✔ Allows management to customize model with internal rates of return and costs for a given project/equipment decision.
- ✔ Eliminates vendor bias on presentations.
- ✔ If cash rich, the model highlights whether to use a company's cash resources or shelter in a tax deductible lease structure for the overall best return.
