

AXXIOME LOANS MONITOR

Gain clear views about every loan, centrally

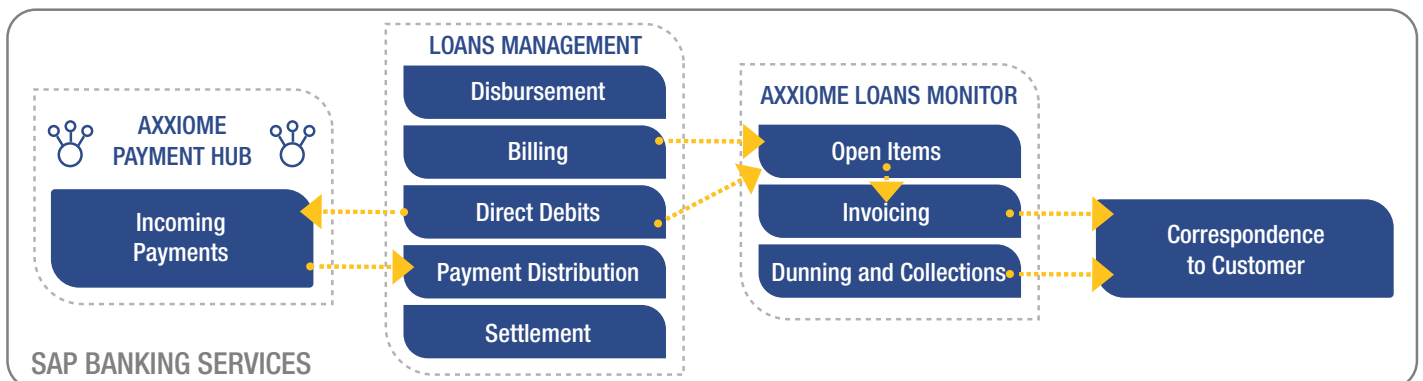

Axxiome Loans Monitor is designed to address gaps that organizations running SAP Loans Management face on a regular basis.

SAP Loans Management, as a part of SAP Banking Services, does not have a solution for managing open items in relation to loans payments. Contract Accounts (FI-CAX), an accounts receivable and payable solution from SAP, is an alternate solution that can address this gap, but comes with limitations.

Axxiome Loans Monitor is an add-on designed for small and mid-sized banks that are considering or already running on SAP Loans Management to seamlessly manage loans collections and payments, while ensuring a lower TCO and an improved performance of the overall loans management business.

The add-on is fully integrated with SAP Banking Services and SAP Loans Management, and offers the following highlights:

- Pre-integrated with Loans Lifecycle Management and SAP Correspondence Tool for easy invoicing, dunning and collection
- Centralizes management of open items on loans contracts, customer invoice creation and extended collection handling
- Focuses on performance and efficiency
- Leverages SAP authorization concept
- Seamless access to all relevant loans data with built-in reporting capabilities

Functional architecture of Axxiome Loans Monitor

AXXIOME LOANS MONITOR

Gain clear views about every loan, centrally

In summary, Axxiome Loans Monitor offers the following powerful benefits to banks:

- Eliminates the need for an additional system implementation; the add-on is installed on SAP Banking Services.
- Total cost of ownership (TCO), implementation and maintenance efforts is significantly reduced, when compared to the alternate solution.
- Direct integration to Loans Management removes the need for data replication between systems.
- Direct integration also enables zero-latency; information is updated in real-time.
- Lowers the system requirements of the overall loans management stack, especially for the ECC, given that the loans process runs end-to-end within SAP Banking Services

Functional comparison of Axxiome Lite with alternate solutions:

CAPABILITY	FI-CAX	AXXIOME LOANS MONITOR
Runs on the same system of SAP Banking Services	✗	✓
Lowers the burden on the ECC	✗	✓
Direct integration	✗	✓
Provides additional collection functionalities	✗	✓

Axxiome Loans Monitor is part of the Axxiome Lite suite.

Axxiome Lite is a set of accelerators designed to integrate with the SAP core banking world and targeted for smaller banking installations. Axxiome Lite reduces implementation risks and lowers the total cost of ownership (TCO).

The suite offers:

- **Axxiome Payment Hub** to integrate banking with the payment world

- **Axxiome Loans Monitor** to track open items within loan processing and handle invoicing, dunning and collection processes
- **Axxiome GL Transfer** to ensure accurate reflection of the assets and liabilities of the core banking loan, deposit and saving products in the general ledger (GL)
- **Axxiome Reconciliation Hub** to provide a framework for reconciliation of different applications and monitoring of any inconsistencies between them
